

Age diversity benefits economic growth.

50 Plus-Skills is an online skills community that provides a platform for individuals, aged fifty plus, to connect with and provide their skills, time and services to business, civil society, academic institutions, NPOs and government.

50 Plus-Skills hopes to educate, connect, encourage and inspire individuals over 50 to look at their next season as one of legacy and to live life to the full. Working longer for money, personal meaning or both is a possibility, but needs out of the box thinking and a system of connections to enable the process.

50 Plus-Skills will engage with the social sector to offer experience and skills of our older community to come alongside your organisation as volunteers and employees to change the future of our nation.

50 Plus-Skills will come along side business, academia and government as a partner in a shared inclusive economy to educate and support your employees who are within a few years of formal retirement. We will also offer a community of quality resources to the market.

We believe in the future of our youth and will look for co-generational solutions with business, the social sector and government
